

Elevation Bed Wedge

The Elevation Bed Wedge is recommended for individuals with pulmonary infections such as pneumonia, bronchitis and asthma as well as hiatus hernia, where elevating the upper body, while resting, provides relief.

Available in 4", 7", 10", 12" and 14" heights, this elevating wedge is ideal for individuals confined to prolonged bed rest.

The standard cover is off-white cotton. An antibacterial / anti-microbial fluid resistant fabric is also available.
